ENTeR

EXPERT NETWORK ON TEXTILE RECYCLING

WHAT WE DO

The ENTeR project focuses on waste reduction to prevent depletion of non-renewable resources in the textile industry. It will strengthen the innovation capacity of textile companies in central Europe, improve sustainable links among industrial textile areas and foster closer cooperation on waste management and circular economy. The project partners are located in five central European countries with a relevant presence of the textile industry and with a national textile platform each.

FORWARD

ENTeR EXPERT NETWORK ON TEXTILE RECYCLING

The project aims to accelerate cooperation between the involved textile territories, promoting a joint offer of innovative services by the main local research centres and business associations ('Virtual Centre'). It will also involve public stakeholders in defining a strategic agenda and related action plan to drive circular economy considerations and actions. The approach of the project is oriented to the management and optimisation of waste, in a life cycle design (or eco design) perspective. The aim is to demonstrate the benefit of an operational collaborative model amongst research and business partners, based on an online tool and shared skills focused on waste eco design and resource efficiency.

FACTS AND FIGURES

 **10** Project partners

 **6** Outputs planned until June 2020

 **1,65** million ERDF

OUTPUT 1

Strategic Agenda on textile waste management and recycling

The aim of the Strategic Agenda is to define the strategy to address the waste management objectives and concrete actions to be developed. It will act as guidelines to foster innovation on waste management and resource efficiency and for collaboration between partners and other actors.

OUTPUT 2

Textile Waste Database

Based on the "Life M3P" platform, the aim of this tool is to help the material match making between the companies offering "waste" and those requesting raw materials. By means of the platform companies can collaborate each other, both in central Europe regions and outside.

OUTPUT 3

Pilot cases

The aim of the pilot cases is to demonstrate that a collaboration among companies, clusters/associations, and technological centers could support and strengthen the innovation on the material resource efficiency and on environmental impact of products during their life cycling, implementing the innovation and competitiveness of the textile sector.

OUTPUT 4

High Level training modules

The aim of the training is to provide high qualified skills in order to face the innovation challenge that companies should face during their innovation sustainability process.

OUTPUT 5

Textile Network for circular economy

The aim of the Network is to set up a "virtual center" among the project technology partners to offer wider services and solutions to resource efficiency and to strength regional innovation capacity.

OUTPUT 6

Action Plan "Improvement of textile Industry towards Circular Economy"

The aim of the Action Plan is to define needed actions to support Circular Economy in the textile sector and available resources for their implementation.
